

Space Presentation - Directions

For this project, you and a partner will create a presentation to **COMPARE AND CONTRAST** various celestial bodies. You will be given class time to work on this project and build the project; however, gathering information and doing further research outside of class is encouraged and expected.

Presentation Styles

You and your partner will **choose 1** of three options to present your information.

- **Interview an Astronaut** – One partner will be the Astronaut and the other person will be the interviewer. The Astronaut will explain their travels to the 2 different celestial bodies. You will need to write a script of the interview. See Rubric for specific details.
- **Daily Space and Science News** – You and your partner will create a 5 minute long newscast. You will act as nightly newscasters presenting the latest in Space News on the topic you choose. You may use pictures as graphics (place into a google slide). You will be expected to write a script. See Rubric for specific details.
- **Infomercial for Space Trip** – Think of those great commercials selling OxyClean or the Ninja Blender or any other longer than normal commercial selling something. That is your task. You and your partner will create a 5 minute long commercial selling a trip to space. You may use pictures, posters, and props in your commercial. The important part is to inform and persuade others to take a trip to space to see (fill in topic here) . You will be expected to create a script. See Rubric for specific details.

Topics - **Choose 2** celestial bodies to compare and contrast

This covers any and all the planets in the solar system, including the moon, the Asteroid Belt, Kuiper Belt, and any comets, including specific comets like Halley's Comet.

I am providing you with a list of possible celestial bodies. IF you are interested in something not on this list, please see me to get approval.
